Direct X AutoCAD Cracked Version 2015 supports DXF version 2.5 and later, saving drawings as native Windows.dwg file format, and DXFPlus, saving drawing as native.dxf file format. DXF is included as one of the drawing file formats that AutoCAD supports. However, it is not a native file format, and is rather a specification for exchange of drawings. The AutoCAD extensibility libraries used to support DXF files are also available for other programs, such as AutoCAD Architecture. DXF is considered the format of choice for general technical and engineering drawings, and many applications that have the ability to import and export this type of data use this file format. DXFPlus DirectX (DXF Plus) is a DWG to DXF import and export feature for AutoCAD. It is a plugin for AutoCAD and the ACADextract utility. DXF Plus is available for free. Microsoft claims that DXF Plus is supported by AutoCAD, and by an "extensive" number of other Microsoft Windows programs, such as Windows Explorer, Notepad and Office. DWG The AutoCAD drawings saved as DXF files can be edited by using other programs. It is possible to open the DXF file in Notepad and modify its contents manually. It is also possible to read the contents of a DXF file from the Windows command line by using the utility ACADextract. If the DXF files are compiled, and if a Windows application is launched, AutoCAD's drawing engine could use the DXF file to draw, e.g. to redraw the plan. Another program, such as Microsoft Word, can be used to view the DXF file as a PDF file. This has a potential disadvantage, in that the drawing can only be viewed using a PDF viewer program, e.g. Adobe Acrobat, and not by opening the file in AutoCAD and viewing it in a normal manner. Support for DXF files is mostly limited to Windows operating systems, although other operating systems can use and import DXF file format, some of these being: macOS (although the format was dropped in version 10.6). ZUKIT () from an open source CAD package Zammit, supports DXF files in the native DWG format but not in DXF format. XML AutoCAD's XML output is primarily a1d647c40b

Field of the Invention The present invention relates to a method and apparatus for enhancing the bandwidth of a communications system. More particularly, the present invention relates to a method and apparatus for combining the bandwidth of a plurality of time division multiplex (TDM) sub-channels in a communications system to achieve a combined sub-channel bandwidth that is greater than that of any of the sub-channels being combined. 2. Description of the Prior Art It is known in communications systems to combine the bandwidth of two or more TDM sub-channels in order to obtain a combined sub-channel bandwidth that is greater than that of any of the sub-channels being combined. One such method is described in U.S. Pat. No. 5,155,531, the disclosure of which is incorporated herein by reference. While the method disclosed in U.S. Pat. No. 5,155,531 does,
