Manual Virus Removal Tool (MVRT) is a lightweight and intuitive software utility developed to provide you with an easy means of deleting items you suspect to be viruses from your USB drives or even your computer, by allowing you to completely unhide all objects, regardless of their extension. The program is quite simple to work with, requiring no installation process, so you can run and use it right away after downloading it to your system. You should note, however, that Manual Virus Removal Tool (MVRT) is not an anti-virus, as it only lets you view all the files in a folder, but it will not detect malware on its own nor will it delete anything without you pressing on the proper button. After launching Manual Virus Removal Tool (MVRT), you can select the drive or folder that you want to investigate, then press on the 'Unhide All' button. In the 'Console', the application will display an event log, allowing you to know if anything has gone wrong or if the operation is completed. Similarly, you can select an item in the directory and press on the 'File Info' button, enabling the utility to offer you

some basic information about it, such as its full path, its 'Size', the date it was 'Created On', whether it is 'Hidden' or not, and other details. In the event that the program unhides a file which you believe to be a virus, you have the option of deleting it manually or you can select it and press on the 'Delete File' button from Manual Virus Removal Tool (MVRT)'s interface. To conclude, Manual Virus Removal Tool (MVRT) is a useful and efficient unhider, that enables you to view the entire contents of a folder and judge for yourself if they are viruses or not, after which you can delete them.1.
