I can select the file using the "Open" menu item, but pressing the "Show In Finder" menu item does nothing. I've been able to reproduce this using the new javaFX openFileChooser() method to open files on my own system, as described in the javafx-docs, using the following code: public class Main extends Application { public static void main(String[] args) { launch(args); } @Override public void start(Stage stage) { FileChooser fc = new FileChooser(); fc.showOpenDialog(stage.getScene().getWindow()); } } If I try and save the image by right clicking on it, the FileChooser's popup menu also doesn't show the "Show In Finder" menu item. Is this a bug? It's easy to fix by adding showOpenDialog(new File("/"), FileChooser.DIRECTORIES_ONLY); to the start method above, but I'm trying to avoid using showOpenDialog() if I can. A: Found this in the bug tracker. This seems to be fixed in the latest version of JavaFX - I'm using 8u202. 'Nightly Stand-up Comics' 'Nightly Stand

Actually it is the 16th year of an economic recovery but some people, such as the President, still don't believe we are in a recovery. In fact he recently made a statement that the economy wasn't growing because it was a period of �
