Description: Executes the specified key combination on the specified message. Description: Tests whether a button is pressed. Description: Allows functions to be invoked via hotkeys. Description: Allows the user to specify the hotkey combination, the message to appear, and the function to be invoked. Description: Allows the user to specify the hotkey combination, the message to appear, and the function to be invoked. Description: Enables you to have more than one copy of a program running. Description: Presents a message dialog containing a string. Description: Enables the application to control the mouse. Description: Allows programs to display icons, menus, toolbars, and context-sensitive help at the appropriate locations within the program or the system. Description: Requires Windows NT 4.0 or later. Allows for the construction of Internet Explorer plug-ins. Description: Requires Windows NT 4.0 or later. Allows a user to take control of the desktop by holding down keys on the keyboard, such as the tab, space, F, and control keys, without having to use the mouse. Description: Enables the user to open, view, and print PDF files directly from the browser. Description: Enables a program to move from one window to another. Description: Enables programs to take advantage of the resource design capabilities of the Windows operating system. Description: Allows program developers to present the user with a progress bar while an application waits for user input. Description: Allows a program to communicate with a network printer. Description: Allows an application 81e310abfb

This is the Tsunami Codec Pack. Overview: Tsunami Codec Pack is a video and audio filter collection that intends to help you decode and encode media files on your computer. It also includes a set of tools for handling video files information and other codecs. The codec pack includes the DivX, XviD and MPEG filters required to play most of the video files available on the Internet. It also includes a set of Direct Show filters such as ffdshow, DivX AntiFreeze, VobSub and DirectVobSub. The list of audio decoders includes the LameACM codec, the Windows Media Audio decoder and other codecs to ensure that you can smoothly play the media files. You can also use the files for encoding files if you are using the computer for creating multimedia content. You can take advantage of the included tools to view the codecs used for creating a certain video file and to repair the damaged or partially downloaded AVI files. The Codec Sniper tool allows you to view the status of all the codecs installed on your computer and to remove the ones that are no longer required. Although the Tsunami Codec Pack has a customizable installation process you might use this tool to remove the components that you are not using. If you are your computer to create media files or to play videos from multiple sources, a coded pack is essential for a pleasant experience. Tsunami Codec Pack aims to provide you with the basic tools for video playback in a compact package. Unfortunately, this codec collection is not actively maintained and some of the components are outdated. Since it might not help you play the latest multimedia formats it would be wise to look for another solution. System Requirements: Tsunami Codec Pack can be installed on the Windows 2000, XP, Vista, 7, 8 and 8.1 operating systems and it supports the 32-bit and 64-bit versions of Windows. It requires a minimum of 2 GB of RAM to run. Tsunami Codec Pack is a video and audio filter collection that intends to help you decode and encode media files on your computer.
