UI Automation The UI Automation API is the mechanism by which.NET programs interact with applications that have built-in support for it, such as Microsoft Office and Internet Explorer. The UIA enables a program to discover and control other applications, and perform some basic actions such as reading and writing files, cutting and pasting, making HTTP requests, reading the registry, etc. This is a powerful tool for the creation of applications for non-graphical based user interfaces, which are often platform dependent, or not suitable for GUIs with a direct user interaction. UI Automation also has a native support in AutoCAD Crack via AutoCAD Crack Keygen's.NET plugin, also known as: The Application Programming Interface (API) for.NET. This API is fully integrated within AutoCAD's architecture. API References To develop a plug-in for AutoCAD using the above-mentioned API's (Application Programming Interface), you must first register and create a free developer account on Autodesk's Developer Network. There are then a number of steps involved in creating and testing your new AutoCAD plug-in. AutoCAD's API is based on the.NET Framework and is available for any program using.NET and COM. Functionality The UI Automation API has a number of pre-requisites such as installing.NET Framework 4.0, a Microsoft Visual Studio development environment, including the.NET Framework SDK.
