The AutoCAD video tutorials available on Autodesk's YouTube channel offer a brief introduction to the basic functions and features of the product. General overview of AutoCAD AutoCAD products are available as stand-alone products or bundled as part of a subscription service. AutoCAD LT (also known as AutoCAD RTS) is a version of AutoCAD designed for use by students and small business users. AutoCAD LT does not support drafting, dimensioning, and presentation features found in the full-featured AutoCAD. AutoCAD is available for Windows, macOS, and Linux. The Windows version runs only on Microsoft Windows operating systems. The macOS version runs on Apple Macintosh OS X operating systems, and the Linux version is available on Linux operating systems. AutoCAD LT AutoCAD LT is the stand-alone version of AutoCAD that is designed to run on personal computers, such as laptops, tablets, and smartphones. AutoCAD LT offers the same functions found in AutoCAD, except that it lacks dimensioning, presentation, and bill of material (BOM) capabilities. AutoCAD LT is a tool that is intended for use by small business users and students. It does not require an AutoCAD subscription, but the Microsoft AutoCAD 2019 Runtime License is required to use it. The Runtime License is available for purchase on the Autodesk website. AutoCAD is available for Windows and Mac. The Windows version runs only on Microsoft Windows operating systems. The macOS version runs on Apple Macintosh OS X operating systems, and the Linux version is available on Linux operating systems. Q: Store UTC value to database and display Local time I have to display the data in one column of the MySQL table having time in UTC format. When i retrieved the data from the database, I display the time in local time (browser) but it should be in UTC format. Does anyone know how can I achieve this? A: If you want to store and display this info as UTC, you need to do two things: Store the time as UTC. It's pretty easy, basically just store the time as a timestamp. On retrieval, convert the value back to local time. For this, you'll want to create a function to convert from UTC to local time. This is what I have, in Python, since that's the language I'm most familiar with.

```
def convert_timezone(timezone, utc): # utc_dt = datetime.utcnow()
utc_dt.replace(tzinfo=pytz.utc) local_dt = pytz.timezone(timezone).localize(utc_dt, is_dst=False)
return local_dt.strftime('%Y-%m-%d %H:%M:%S')
```

 This will use the browser's local time, and turn it into UTC. If you pass it a string of the time, then it will return the time in UTC. A: If you are using MySQL, you can just add the TIMESTAMP type to your columns and MySQL will automatically convert dates

Markup Assist (Version 1.0): Markup Assist is an easy-to-use Microsoft PowerPoint Add-in that provides on-screen guidance and feedback in real time. The primary goal of the add-in is to assist the user in the incorporation of text, arrows, and other design elements into your AutoCAD drawings. (video: 2:02 min.) Connected projects: Projects and sub-projects can now be conveniently shared through AutoCAD. Workflows for project dependencies can be created and shared via AutoCAD's project templates. Sharing a project means generating a local file for the project—and that's a big advantage when you don't want to worry about the original file and its dependencies. (video: 5:13 min.) Align points, traces, and angles Many command extensions that control properties such as alignments have been removed in order to make room for new ones.
