Q: Capistrano 3 deployment with multiple web apps I'm about to release the first version of my SaaS. Currently, I use capistrano 3 to deploy my application. I would like to launch two instances of it, but I'm already deploying 2 web apps in my server. When I try to run the deploy script, capistrano 3 crashes with an error * switching to `user@example.com` ** [out :: user@example.com] User group 'user' does not exist The problem does not exist on my local machine but also if I edit my production.rb and to deploy to one app only. In this moment, my deploy.rb file looks like : set :application, "sa" set :deploy_to, "/home/#{fetch(:application)}/public_html" set :user, "user" set :use_sudo, false set :scm, "git" set :repository, "git@bitbucket.org:saglock/crush.git" set :scm_passphrase, "blablabla" set :branch, "master" set :deploy_via, :remote_cache set :deploy_via, :copy set :copy_exclude, %w{.git.gitignore.gitmodules.hg.svn} set :stage, :production set :linked_files, %w{config/database.yml} set :linked_dirs, %w{log tmp public/uploads} set :puma_worker_timeout, nil set :puma_activate_config, true set :puma_config, "#{fetch(:stage)}.pumac.yml" set :puma_bind, "unix://#{fetch(:deploy_to)}/tmp/pids/puma.state" set :puma_preload_app, true set :puma_worker_count, 1 set :puma_workers, 1 The error happens on the last line. It's probably something really stupid, but I've been using capistrano for a while and I can't find where I did something wrong. A: set :
