The previous update was 3 months ago and we decided to start using the Unreal Engine to get the game running in VR. This was a huge decision considering the technology and the time involved but I'm glad we took the decision and came across a great team that helped us make this happen. We are now in the alpha phase of the game with a playable prototype done in Unreal and using the VR mode (mount and play games) with the HTC Vive to see how we can progress further without spending a fortune on development

Dungeon Chest is an old-school puzzle game. You play as a young man who has recently learned the exciting legend of the Treasure of Akzbezth. Eager to obtain the many riches undoubtedly stored within, he travels to South America to enter an ancient Inca dungeon where the treasure is said to be hidden. However, he may soon find that it will not be as easy as he thought. Contents Discover and control the Zorb by using your mouse and keyboard to navigate its four walls as you move your mouse, and trigger its dozens of unique behaviors. Learn to manipulate it in order to complete a variety of crazy levels, containing obstacles and puzzles based on physics. TIP: Think of the Zorb as a gamepad that can be used to navigate and navigate through obstacles and to touch or interact with game objects. Features: - Super fun! - A unique game mechanic that will challenge you on multiple levels. - Work through levels to unlock all achievements. - Explore a huge world of mazes, twisting rooms, TMs and more. - Point and click to move the Zorb in your current maze and navigate its environment. - Constructs gate to open doors. - Use items to solve puzzles and obstacles. - Taps, floats and more. - Four different maps and a bonus one in a zip file. - Soundtrack by Kevin MacLeod. - Follow me and get tips and updates on Twitter. - Submit your free achievements to your email. - Easy and clean user interface. About This Game: Dungeon Chest is a different type of puzzle game. You play as a young man who has recently learned the exciting legend of the Treasure of Akzbezth. Eager to obtain the many riches undoubtedly stored within, he travels to South America to enter an ancient Inca dungeon where the treasure is said to be hidden. However, he may soon find that it will not be as easy as he thought. Inspired by Labyrinth, Dungeon Chest uses more than 60 unique puzzle elements to create exciting and challenging levels. Dungeon Chest comes with 4 maps. The maps are created with Unity 3D and contains unlimited levels, and contains no specific path or steps. This means that you can construct puzzles using the map. That's why this game is very different from other puzzle games. You can follow me on c9d1549cdd

----- Block Wizard gameplay is very simple, but can also be very puzzling. The idea is to destroy the shapes, by chaining blocks together to build lines from the bottom up. Lines can be "deeper", going down to a lower "floor". If you go too high, however, you'll fall down. If you can successfully build a longer line of blocks, you'll move a little closer to the next level. Game Mechanics: ----- As you go through the game, you'll collect blocks of different colors, for all different purposes. You'll use them to knock out colorless blocks, to complete chain segments, or you can also use them to chain blocks together, which is how you get to the next level. You'll use those to stack atop one another to reach the next floor. The levels are stacked using a pair of doors, which you'll eventually need to use to proceed. You start each level with 8 seconds to get through the level. You can use your movement to work your way to the bottom floor before the timer goes off. You can use the tower to slow your descent, as well. You'll have to be careful about how you use your movement, as you don't want to get knocked off, but using the towers is a good way to slow your descent, especially if you were close to the floor when the timer ran out. The game also has a "CHAOS MODE", which, if you unlock it, will randomize each level and drop a tower on each floor. The game starts you off with ten seconds to complete the level. You can still use movement, and still slow down on the towers. If you die, you lose the game. If you go over the time limit, you'll go back to the floor where your last save was, and if you lose the game, you'll lose your progress through that level. While you're in Chaos mode, you have the option to clear out the bottom floor of a level, and start with a new one, or choose to use your current progress. If you've been knocked down on a level with a tower, you'll always clear out the bottom floor on the next run through. Game Block Wizard is the story of the Block Wizard who is born on a winter day on December 7, 1987. He does not know his place in the world, and soon finds out why he should be afraid of that grey tower behind the dark door. Sometimes this is the

**What's new in The Banana Saved The World:**

: This is an old posting. I thought this was written in a different way around. Watching and listening to it, should beat the J-E-W hog but what a howler. I reported the Best Game Ever posted by vd5212. Glenn Beck called it a Ponzi scheme and he was in the right. I missed that thread so I couldn't have commented either. What about the guy with the big penis on the Right Wing Daily News that kinda said that her was going to be a Joe Lieberman 2008/McCain 2012 run for office? Since I expect we're not going to get a President candidate with maturity in and out of the Oval Office or anything resembling the kind of vision necessary to steer us through a time of massive technological change, I'm planning on voting for Winston Churchill. He said it all, and he did it when he was our Prime Minister. Another guy said that in none of the security issues has the President or any of his advisors or Cabinet or senior military leaders or intel or military people ever used the phrase, "we lost our aircraft, just like we lost our aircraft in the Six Day War." Good Lord, I haven't seen or heard a single person or any politician ever using that phrase nor have I ever heard it from any of my friends and relatives. Heck, in the TV shows, commercials and everywhere else since then, it's as if the only thing remembered is we lost the spark plugs from the planes we sent to Israel. You know, we sent. That's it. We lost. Then someone brought up the DC-3 and that it was a stage four monoplane...it should have been a stage four monoplane with Rolls Royce Merlin engines for that matter, but it was different. I have no idea what kind of aircraft that was. While I didn't know it at the time, this expression of I'm afraid to see or hear it, is actually a popular one. Ask a bridge club president this morning just how much problems he's having with his bridge hand and he can tell you the market for that is busy. Same for Real Estate agents. They hear a stupid expression like driving by the old mill every day and they scratch their heads and say does that mean someone is going to drop dead someday from choking on a fish or, I've heard that too.

Thank you.Q: What will happen if I delete a CoreData entity of version N? I have a CoreData model, and it has one to many relationship. Let's say it's a parking lot (has many tenants, has many parking spots). I'm using CoreData's built in change tracking (which has a fault) to have NSManagedObjectContext saveContext update the CoreData model for me when data is changed. Now let's say I delete a tenant at any time. Since CoreData is keeping the data of this tenant around until the change tracking snapshot is finished, I can do that easily, and not have to worry about any changes from the other tenants. I think it will create an entity with nil values for any properties that the tenant object had. Will CoreData delete the tenants entity with a nil id in it, and increment the version number of the tenants? My question is not about the mechanics of CoreData: how a persistent store is implemented. I'm interested in what happens when CoreData will create a new version of an entity that has been deleted. I'm not sure whether it has some way of knowing that it has deleted this entity, and will delete it. I'm just looking for a little confirmation. A: 1) CoreData knows that it deleted the data and if there is a referential integrity
