* **Color modes:** These modes enable you to choose among thousands of color combinations to specify your colors. Gamut warning: Adobe calls them color modes, but we call them color modes, too. Color modes let you specify colors using a different color and grayscale range. (Gamut warning: The gamut is the spectrum of colors that can be expressed with a particular device, and the range of color a device can represent; the "gamut warning" is that sometimes this range can be very narrow, and Adobe doesn't always specify that.) For example, a color mode called "Hue/Saturation" has a range from −60 to +60. If you increase it to +80, you are creating a color that is brighter and more saturated. * **Editing:** This feature offers tools to create layers, blend modes, crop, apply effects, adjust levels, use filters, work with smart objects, and much more. * **Layers:** With a hierarchy of layers, you can be selective in what you edit, and then choose whether and how to render it. * **Color:** This tool gives you access to any number of color adjustment options and tools. You can tint colors, adjust their hue or saturation, add a black or white point, and many other tools. * **Painting:** With the Brush and Eraser tools, you can paint and erase directly on layers and the image document, and use them to paint any parts of the image. * **Paint Bucket:** The Paint Bucket feature offers many tools that let you select and paint out areas or objects. You can even paint with different brush sizes or colors. * **Blend Modes:** The Blend mode options of layers lets you combine objects and backgrounds and apply textures and patterns. * **Draw:** This feature gives you a series of tools for drawing simple and complex objects, vector images, and other objects. * **Align:** This tool offers a choice of options to align objects and the image document and is helpful for arranging images. You can also use it to set an object's position relative to another object or the edge of an image. * **Filters:** This tool enables you to apply two or more Photoshop filters in a single operation, not only on an individual layer but on the entire image. You can also apply different filter effects to different layers, and group layers and filter

ALGIERS (Reuters) - Algerian forces killed 15 Islamist militants in a gun battle on Wednesday in the northern mountains of the Sahara desert, a security source said. The militants ambushed an army convoy last night carrying army troops to a base to retrieve fuel supplies from a refinery some 65 km (40 miles) from the Mali border, the source said, adding that the Islamic State group claimed responsibility for the attack. Algeria's army also thwarted an earlier attack by Islamist militants last year that left at least 42 soldiers dead, the source said. "An armed group attacked an army convoy, killed (at least) 15 militants and heavily damaged a vehicle carrying supplies. One troop of the 19th Artillerie Regiment was injured," the source said, adding that the militants also carried out several attacks on rural areas of Boumerdès province. "The toll of the civilian population was unknown." It was not possible to independently verify the account and there was no immediate comment from the army.You are sending an email that contains the article and a private message for your recipient(s). Message Text: Apple on Monday introduced a new version of its App Store, called the App Store 4.1. The changes were introduced with the new version of Apple's mobile operating system -- iOS 5. Here are a few of the highlights: - Apps that were previously approved by Apple now must meet the company's revised guidelines. They are now rated for kids and other categories, and developers cannot choose the age at which their app will be approved. There is a "kid" rating and a warning for apps that should not be viewed by children. - "Fixing bugs" has been removed from the list of reasons developers can use to reject an app. - The "An App Store Policy" in iTunes 12.2 introduced by Apple last week and highlighted in a message was designed to give developers more control over what goes into their apps and how they are listed.This piece was originally published on March 16, 2013. Q: Yii2 - How to render pagination and sorting at once for ListView I have ListView using search button. I would like to show to render Search button and pagination together. When I put all in listview I have this: ListView::widget(['dataProvider' => $dataProvider, 'select' => 'id', 'options' => ['class' => 'btn-search'], 'htmlOptions' => ['class' => 'btn-search'], 'listCssClass' => 'list-group', 'pagerCssClass' => 'page-pj', 'layout' => "{items} {pager}",]); Then I have this: $this->render('index',['indexes' => $indexes]); And it looks something like this: How can I render pagination at once? How can I render sorting at once? Edit: I have following code in controller: $search = new Search(); $search->Model = $model; $search->search(); $model->search = $search->search; and in model Search(): public function search() { $this->setState('search', $this->getQuery()); if (!$this->hasIndex('id')) { $this->addIndex('id'); } $this->update(); return $this; } I have: public function getQuery() { $query = ''; if ($this->hasSearchTerm($this->getSearchTerm())) { $query = '(pricematch = '. strtoupper($this->getSearchTerm())). ')'; } return $query; } And in model: public function getSearchTerm() { return $this->search['term']; } I also have pagination and sorting at the moment. A: Use render() method instead of $this->render() method
