You can learn about the way images are organized by taking Photoshop CS4 Classroom Training. One of the most useful Photoshop tools is the extensive selection tool. Artists know the lifesaving power of selection tools and bemoan the lack of good ones. The Photoshop selection tools are the same ones that have been available for years in the painting programs, like Corel Paint Shop Pro and Painter. ## Using Photoshop's Selection Tools Photoshop's selection tools enable you to manipulate an object on the layers by adding, subtracting, and manipulating different areas. You can add, subtract, and modify your selection with different selections and tools. See the following list for a rundown of the tools available.

In recent years, Elements has become increasingly popular. It has also fallen behind Photoshop in some areas. Some features, such as layers and channels, have been re-added, and it has more options than it used to. But it is significantly less expensive than full-featured Photoshop, and its most important advantage is that it's free. Let's go in-depth and learn how to use Photoshop Elements to edit and create images. This tutorial will focus on the basic and most essential features, which are similar to what you'll find in Elements 10. You can use this tutorial to learn how to edit and create images. The author, David Lepeska, has been making images for the past 6 years. He is a web designer and graphic designer. He's happy to share his knowledge with you! Enjoy! Table of Contents Creating Images Click the image below to create a new document in Photoshop Elements. Adding the Image Files and Editing the Background Now that you've created a new document, add the images that you want to work with. You can upload or download images from the web, your hard drive or a file. You can also drag and drop the image files into the document. The background of your image will look like this: If you want to create an image using an existing image, click the drop-down menu under the image and select "Create a New Layer": Now, add a new layer by pressing Ctrl (Windows) or Cmd (Mac). This will make your image background transparent. With the background black or gray, you can see your image beneath

it. To hide the black background, deselect "Background". Now, you can start to add an image or images to the new layer. You can make the image the background layer by double-clicking on the layer. You can also change the order of the layers by dragging them with the mouse. The image's background and the image itself will look like this: Creating a New Layer Click on the layer in the Layers panel to open it. To make the background transparent, press Ctrl (Windows) or Cmd (Mac) + I (Mac). This will hide the background and give you an image like the one below. You can drag and drop the image into the middle

Q: How can I prevent my git repository from altering the names of files that are being imported? I have a git repository (versioned with GitHub Pages). When I pull the source from the repository it changes the file names to the branch names, even though the file name is the same in both the branch and the master. For example, if the branch was branchA and the master was master, but I merged branchA into master, and I pulled the source, the source should look like this: src/ form/ input.php output.php /main.php But, it is actually: src/ branchA/ form/ input.php output.php /main.php master/ form/ input.php output.php /main.php Is there a solution to prevent this from happening? My current solution is to do a pull first to update the master, then do a pull to update the branch. But, this is quite tedious and I prefer to do an automatic pull. Any help is appreciated! A: It is a known issue with GitHub Pages. I suggest either setting up a local branch to serve as a development branch (or a branch you can do all your development on), or using Jekyll. Q: Replace figure name with figure number in Grid-diagrams I want to replace figure names with figure numbers in the Grid-diagram in a LaTeX document. So instead of figure 1 I want to have figure 1 How can I do that? I tried to search the page for the string "figure", but did not find the option. A: In there, the figure

Q: How to retrieve a list of roles from a Active Directory I have an application that I want to auto login a user on logon/authentication for the first time and then store a list of all roles for that user so that I can assign them appropriately. Is there a way to accomplish this? A: On your application's login page, ask for the user's SID. The SID can be found on the Windows logon page, or by using UserPrincipal.Current.Sid. Using the SID, you can query the AD to retrieve a list of roles that the user is assigned to. If the user is not assigned any roles, you will not get anything back. To get the list of roles for the user, use the UserPrincipal.FindByIdentity method. You can do this all in a single query using PrincipalPermission and PrincipalContext, or you can do them in two queries: one to get the user's SID, and a second to get the list of roles. A: It depends what exactly you need to accomplish. If you just need the user's role at the time of authentication, then you will need to retrieve the SID of the user in question (UserPrincipal.Current.Sid). If you then wish to retrieve a list of roles for that user, you can use Directory.Users and Directory.GetDirectories functions. The sample program RetrieveUserRoles has an example of retrieving a list of the roles for a user using this approach. Q: Sonos music app only shows 2 songs on Mac I have a few music apps, like songs and sound cloud, and they all work fine. The sound is great, so I'm not sure what's wrong. In Sonos, all I see are 2 songs. One is a song by an artist and the other is a song that the artist itself has on its album. In SongS I can see there is another song in the artwork, but it doesn't play. When I try to play it by clicking on the song, it doesn't work. In the Music App I see all the songs in the artwork (as I'm in the latest update), but all that are playing, are the 2 songs in the Sonos app. A: See if you have the updates installed: Go to the
