View and display video. AutoCAD's graphics system is based on 2-D and 3-D objects (such as lines, polygons, arcs, surfaces, and solids). The software supports a variety of input and output methods. These include bitmap-based drawing, drawing based on raster and vector data, and vector data output. Three AutoCAD views with the entire drawing visible. The drawing can be rotated by 45° and viewed from various angles. Autodesk's AutoCAD can read and write 2-D and 3-D drawings in the following formats: 2-D: *.dwg: Autodesk's native DWG format (.dwg), a vector format that supports parametric, pattern, and transparency effects. *.dxf: Autodesk's native DXF format (.dxf),

Automatic labeling. Data management and analysis. Graphical and visual features. Time, schedule, and project management. Animation and simulations. Interoperability. Distributions AutoCAD is available in two types of download: Autodesk AutoCAD Standard: This is the full version of AutoCAD that is compatible with all Windows operating systems. It has all of the features of the Pro or Architectural Plus version but does not include professional-only features. AutoCAD LT: This version is for limited use. It is preinstalled with AutoCAD LT and will not replace the original or Architectural Plus version in the future. The distributions are compatible with any computer that runs Windows 7 or later, but the AutoCAD LT distribution supports Windows Vista, Windows XP, and Windows 2000. AutoCAD LT has similar compatibility limitations to Windows Vista. The product is distributed as a perpetual license. The cost for a perpetual license includes the hardware and software of the AutoCAD software on the machine where the software is installed. The product is distributed under a software license agreement (Agreement) that is available at the end of the install menu on the activation screen. A number of the features available in the software such as the full path, initials,

annotations, auto-extend, and aliases will be disabled until this license has been purchased. Once the license is in place and the software is installed, the default working file paths will be updated, the working file names will be changed to reflect the original name of the file and the default initials will be enabled. Documentation There are no manuals available for the software, but AutoCAD has an online "Help" system accessible from the right-click menu or from within the software. The online help system has both AutoCAD Help topics and JavaScript-based Help topics. AutoCAD Help topics are displayed in a standard dialog box, while JavaScript-based Help topics are displayed in a pop-up menu. In addition, two feature disks are available: A Help disk: This can be found in the "My Products and Solutions" section of the application. This is a special CD-ROM with a series of Autodesk installation files that enable assistance when installing AutoCAD on the computer. A Technical Support disk: This can be found in the "Support" section of the application. This includes technical support documentation such as system requirements, how to enable ca3bfb1094

O: Get the time difference between two times in a batch file I have a problem with a batch file that tells me the time difference between two times. The batch file has an input parameter with a name called starttime and an input parameter with a name called endtime. The user enters the start time and the end time in the format "hh:mm:ss" (time format dd/mm/yyyy). After he enters the start and the end time the command "time /t" gives me the time difference in hours, minutes and seconds. Now I want to calculate the time difference in hours, minutes and seconds. For example if the user enters starttime and endtime as "08:00:00" and "10:00:00" then I want the batch to tell me that it was 8 hours. My attempt is this: @echo off setlocal set starttime=%1 set endtime=%2 set /a total=%endtime-%starttime% set /a result=%total:~-4% echo %starttime: =0% I findstr /R /C:"0" if "%result%"=="0" (set /a total=%endtime-%starttime% set /a result=%total:~-4% echo %starttime: =1% | findstr /R /C:"1" if "%result%"=="1" (set /a total=%endtime-%starttime% set /a result=%total:~-4% set /a total=%result:~-2% set /a result=%total:~
