TheBardsTalekeyserial

Note: Save us from the great freeze problem. I tried to solve this problem for a week. After a lot of effort and patience I got my solution. Here is my solution. Open serial port (COM1) and connect to your system. Now you can stop restart the computer. You should follow the following steps to save serial number keygen activator: Open a command window as administrator. After that, type this command: net use z: \\machine\c\$ Next, enter the password to access this shared drive net use z: \\machine\c\$\keygen Then, type this command: keygen /n yourserialnumber For example: keygen /n 1234 Remember this number Now close the command window and reboot your system. Enjoy working with serial keygen! Q:

How to create plist file in objective c? I want to create plist file in my project.I try this code

```
NSString *plistPath = [[NSBundle mainBundle]
pathForResource:@"myPlist" ofType:@"plist"]; NSArray *paths =
NSSearchPathForDirectoriesInDomains(NSDocumentDirectory, NSUserDomainMask,
YES); NSString *documentsDirectory = [paths objectAtIndex:0]; NSFileManager
*fileManager = [NSFileManager defaultManager]; NSError *error; NSArray *paths =
NSSearchPathForDirectoriesInDomains(NSDocumentDirectory, NSUserDomainMask,
YES); NSString *documentsDirectory = [paths objectAtIndex:0]; NSString *plistPath
= [documentsDirectory stringByAppendingPathComponent:@"myPlist.plist"];
[fileManager release]; [documentsDirectory release]; [plistPath release]; [array
addObject:plistPath]; [array writeToFile:plistPath atomically:NO]; return; And result
is always null. Also I think my plist path is right because plist app is created and
working fine. So my plist path is something like
NSBundle.mainBundle.pathForResource:@"myPlist 6d1f23a050
```
