
FULL CodeVision AVR V2.05.3 Standard [VERIFIED]

Hello everyone, Good afternoon! I am coding in CodeVision AVR and using Atmega 128 IC. . This program has been developed in accordance with the CodeWizardAVR V2.05.3 standard. My problem is that using code and compiler (AVR Studio 4.5) I can't debug the project. . I can only debug compiled files. . This is because the compiler is not debugging on the command line. . If I debug the project through the debugger I can only see one line of code and then I have to run my program. . With code and compiler, I can only see the latter. . If I create a new project from my existing one, I can see everything. .
