

Deejay V12 Software

deejay v12 is djing software designed specifically for today's djs. the concept is pretty simple: you have a set of tracks that you want to mix together, but you can only find a limited number of them on your computer, so, you simply cut a new track out of the song you want to use, and drop the new track in its place. deejay gold (v12) is a powerful dj mixing application. each track from your mp3 files are processed in the djay mixer, which then produces a two channel mix from which, you, the dj, may select all, some or none, the selected tracks, after being combined in the mixer, are outputted via two beatmatching midi channels to various control surfaces and effect plugins, such as a cdj. with this new version of deejay gold, users can perform automatic mixes, create songlists, and save songs to mixes and playlists, in a variety of formats such as apple's song format aiff, winamp m3u8, wma, aac, and wav. the new mixing capabilities include many other features including automatic mixing, volume and panning, round robin mixing, and automatic song routing for easier dj mixes. virtualdj lets you stream tracks from our partner catalogs directly within the software. play anything from the millions of songs available, discover new tracks from tailored charts, and create your own playlists with ease. from mainstream to underground, everything is available right at your fingertips. all in high-quality formats, you will always have access to the best versions and remixes intended specifically for djs, to karaoke and music videos, or to broader generalist catalogs like deezer and soundcloud. you will never run out of music to play, or be unable to fulfill a client's request.
