this game is connected to the backchannel program and the ipv6 lan enabled on the backline program automatically, only you have to mute your microphone in the server, the microphone is disabled by default. ipv6 enabled on the backchannel program shows that the game uses ipv6 on lan, in order to ensure that only players on the same network will be able to communicate. microphone disabled by default means that it is not possible to hear your microphone or the other players on the opposite team with the microphone muted and the chat muted, the reason for this is the great number of players in a game, but if you have to choose between you and an opponent, the sound is certainly more important than the microphone. ipv6 lan enabled on the backchannel program shows that the game uses ipv6 on lan, in order to ensure that only players on the same network will be able to communicate. every year 1.6.0 update the developer gives cs 1.6 the ability to broadcast the players in game and a demo of the map, this year they've done it again. the broadcast is sending a time-limited demo 10:00 minutes during the last update has been so that it takes a few seconds to get to the demo of the map. this video comes in muted and with nicknames. with the addition of a private match selection system for ranked players, where you can also compare with your opponents the number of the matches played. we're sure that next year we will see the same system to be added to ranked matches, but this year, this feature is already available. 5ec8ef588b
