Quake Shakes

Quake Shakes is an earthquake tracking app which shows you recent worldwide earthquake activity and displays them on a map with info on location, date, time and size. Earthquakes of various magnitudes are displayed with different colored dots, giving you a dramatic visual record of the seismic activity during the past 24 hours or week. Data feeds come from the US Geological Survey website which is linked to a global network of seismic sensors, recording up-to-the-minute earthquake activity as they happen around the world. Quake Shakes gives you different different options, including quakes from the last day and week as well as various map views. Get Quake Shakes and take it for a spin to see what it's really capable of! Quake Shakes Features: Maps: Map view shows all quakes and traces in a map format. You can also filter quakes by time, magnitude, distance, and date. Traces: Trace view shows the last 10 quakes of a selected magnitude. Views: View of various quakes in a week, a month, or all-time. Reports: You can generate a detailed summary of the past 24 hours or a week. Statistics: Statistics of the last 24 hours, a week, or all time. Calendar: A calendar view of earthquakes of a selected time range. Calculator: Calculate earthquakes in a time period. Settings: You can change the report and map views, log in and out of the application, and manage your location and map tiles. Share: Send earthquakes as a picture or text message to your friends. Options: Options let you set the earthquake colors for the map view and the size of the earthquakes. Themes: Theme styles let you change the background color of the app. Quake Shakes is a free application available for both iPhone and iPad. The app is optimized for the iPhone, but it has some features that can also be used with the iPad. Updates: Version 1.0.4: January 27, 2016 Version 1.0.2: October 28, 2015 Version 1.0.1: June 13, 2015 Version 1.0: January 12, 2015 Version 0.9.2: July 24, 2014 Version 0.9.1: June 24, 2014 Version 0.9: July 10, 2013 Version 0.8.1: July 2, 2013 Version 0.8: June

Data feeds come from the US Geological Survey website which is linked to a global network of seismic sensors, recording up-to-the-minute earthquake activity as they happen around the world. Quake Shakes gives you different different options, including quakes from the last day and week as well as various map views. Get Quake Shakes and take it for a spin to see what it's really capable of!The hemostatic system: a novel approach to the bleeding management of Jehovah's witnesses. Jehovah's Witnesses present a challenging patient population to the practicing hematologist. They have a common belief that they should be able to refuse the administration of blood products. To deal with this difficult situation, we combined three hemostatic strategies in order to achieve rapid hemostasis in a Jehovah's Witness patient, a 58-year-old man with a small asymptomatic right-sided retroperitoneal hematoma. The initial intravenous transfusion of three units of packed red blood cells yielded delayed hemostasis because of the Jehovah's Witness

patient's belief that blood transfusion should not be used as a means of emergency treatment. Prehospital administration of protamine, heparin, and 1,000 units of fresh frozen plasma enabled rapid and complete hemostasis to occur, even though the hematoma measured 16 cm in diameter at presentation. The protamine was administered intravenously because the heparin was given subcutaneously. Thrombin was administered in combination with platelets because the patient was diagnosed with disseminated intravascular coagulation. As a result of using these three hemostatic strategies, we were able to successfully treat a Jehovah's Witness patient in whom immediate hemostasis was delayed.Q: return json data in AngularJS How to return json data from controller to front end. i want to return the data to front end in json format. I am using AngularJS for CRUD operations. Thank you. A: Why would you return a json from a controller? You should always return a data structure in your controller, which contains your data. Example: .controller('SomeController', ['$scope', '$http', function($scope, $http) { $http.get('/some/rest/resource') .success(function(data) { $scope.result = data; })
