Each review we've ever done has focused on some aspect of Lightroom or Photoshop and yet we cannot give it **5 Stars** without applauding the power and flexibility of the software, the development of new powerful ways to process photos. This is not the state of a new-to-the-table version of an app, either. It represents the future of photo editing and is the reason Lightroom already has over 5,000,000+ downloads, becoming the most popular way to manage and edit digital photos. As for Photoshop, it is obvious that as it has grown from the age of Windows-based desktop shared workstations to being installed on multiple desktops and platforms, the software has grown, too. The more powerful it is, the more it must use features and techniques that only a computer can do. One thing is sure: Adobe has done a great job in designing a photo editing solution that works both on a desktop and mobile device, on a Mac and on a PC as well. **ABOVE:** Photo shoot. **BELOW:** Photos having been imported. **LEFT:** Color balance and color temperature. **RIGHT:** Details of the same photos, as seen on the App. Both are powerful family systems and my first choice for developing and editing images. Although the App has earned the 4 awards for the Best App of 2014 and 2015 from Apple, the desktop client even got the 5 spot of the downloads for 2015. The latter was awarded to Google Photos for its new Import function.

I know that so far Photoshop has released some impressive versions of DVDs about : How To, Create The Perfect Photo And still Photoshop I think this may be the best. It is supposed to be E-book so once you have it, it is easy to absorb and use.

This DVD is especially for beginners, so if you already know some things then you should be fine. The purpose is it is to help you to create your own unique kinds of slide shows, with the quality of your own presentation being the only thing that determines the quality of your product. So, let's start.

One of the things I like in this DVD's slide show that made it so unique is the torn paper. No other DVD had the same thing. I also like the nice graphical looks of the DVD cover. As creative as Adobe Photoshop is, it's not perfect. It has difference than the competition that makes you specialize. A few of the things that set photoshop apart is:

- Creates everything. It can take photos, videos, and images and turn them into anything needed. This creates the potential to create pro content.
- Creates content for a wide range of platforms. It can be viewed on many platforms.
- Creates online and print-ready content.
