Adobe Sensei, available in Creative Cloud-tailored applications including Photoshop, Illustrator, InDesign and Lightroom, turns the art of digital artistry—from painting, drawing and illustration, to digital photography, video and motion graphics—into a collaborative, professional creative process. While connected RGB and HD videos are the norm today, AI adds a new dimension in live, local and collaborative editing. Using machine learning and machine vision, Adobe Sensei allows two people to simultaneously edit individual clips to create interactive, real-time edits. Unlike voice assistants like Alexa and Google, AI can be used with a full Photoshop editor experience, resolving common issues like accidental selections, color sliders displaying improper colors, in-app notifications and cross-device synchronization. The Photoshop family of products are known for their capabilities and straightforward design, and that's only getting better with the newest feature updates. The most advanced feature for web designers is called multi-canvas preview. It lets designers preview a composition in the browser, where any of the canvases can be repositioned, resized and mirrored in real-time. Photoshop CC 2019 features an entirely new performance profile that enhances compatibility and multi-GPU performance while running on a Photoshop product designed for Windows 10, extending the features for designers that use remote workstations and next-generation Windows 10 machines.
