The first feature in Share for Review is on-the-fly collaboration. Now, images can be shared and edited in Photoshop with the click of a button. When the user shares to Share for Review, that version is automatically synchronized in the cloud, and the other recipients are provided a link that opens in a brand-new tab in Photoshop. They can apply or revert any changes immediately, and all changes occur on the original version. This new cloud-based collaboration tool also saves time and resources, as no new version of an image needs to be downloaded, uploaded, or shared. Additionally, the application integrates with Adobe Project when users move assigned layouts into “distill projects,” which removes most of the layers and any components that Photoshop drew when creating the page. Users can then see a stripped-down page with all the information they need for their freelance job. As with Photoshop Professional and Premiere Pro, Adobe Sensei AI is designed to analyze an image and extract interesting layers free of noise. They can be manipulated using smart filters for further enhancement, and the AI system corrects, for example, red eyes by adjusting the exposure and white balance to fix overblown scenes. The feature also lets users back up and share the content created with AI. The output includes a stylish visual representation that can be used on social media or to print. The AI techniques supported are design-wise and include removal of facial features, noise, and sharply contrasted areas that would attract the eye.

Greater editing power. Photoshop for Web, a new desktop application targeted to the traditionally

challenging workflows of creating, integrating and editing design projects for the web, brings new features to Adobe's award-winning Photoshop editors. You can now edit Final Cut Pro (FCP) or Avid.mov files directly from the desktop version. And a new one-click Delete and Fill tool replaces the time-consuming, labor intensive and often infuriating Create A Better Outline tool. The new Delete and Fill tool is an atomic operation, one step that undoes everything that has already been done to the image, including fill and stroke, clipping, transforms, paths and channels, and mask layers. It's like putting your wine back with the cork, without having to try and figure out which cork came with it. Finally, the new Delete and Fill functionality is available when you use layers as selection or mask layers. This is an unprecedented and groundbreaking addition to the editor. It also enables you to realize the full potential of intelligent selection tools like the Content Aware Move tool. The new Web features of Photoshop for Web are incorporated into the Mac and Windows desktop versions of the award-winning tools, so you can seamlessly edit multi-project workflows across any platform. In addition, the new features are not just limited to graphic editing. For example, if you edit raw photos using Adobe Lightroom, the new Web features will let you save in the camera format that you use with that software.
