I like the new look and feel of CS6. After using Corel for 2 years, I appreciate the updates to the UI/UX and tools. On OSX, I chose to keep the toolbar and menus up top. And I like the new shortcuts. I'm still using my mouse a lot — but, a mouse and keyboard is an IDE (intimate development environment) for me. Thinking of a workflow that starts with a raw file, goes through core retouching/color correction up to compositing/rendering into a final file is a very familiar one—but in CS6 one highly powerful addition to the workflow is the new Magic Wand. This tool allows you to color correct directly in Photoshop (or other creative tools). This tool opens up a lot of flexibility for applying clear, local color correction. I look at a lot of photos in a row and the ability to correct a photo in the sequence in a realistic workflow, without having to initially open a retouching tool and apply correction, allowing me to immediately see the results in a Photoshop window is key. It's almost like a pencil — I can set the parameters and apply color balance, clarity and exposure from anywhere in Photoshop. Camera RAW is easily the most important—and most confusing—change from previous versions. To RAW, the name is, well, appropriate. Aside from the seeming naming change, CAD (Camera Raw) is a collection of plugins that is a standalone image editor as well as a Photoshop module that can be used within the menus of Photoshop. Adobe has revamped both Photoshop CS6 and CS6 Extended, giving them a complete overhaul. This year's update makes the upgrade to Photoshop CS6 Extras, which is Adobe's version of Lightroom, even more tempting, particularly as CS6 is now available for iPad users.

Adobe wants Creative Cloud to be the fastest and easiest way for creative pros to get more work done, faster. To that end, today at MAX, Adobe demonstrated the beta version of new features to make it easier for experts to collaborate. The new collaborative experience ranges from convenient mobile features like editing images in a browser to tools for web, mobile and desktop that were reimagined for today's creative professionals. For the desktop product, the powerhouse feature is "Layer Bags," which preserves layers and materials. It lets you easily reuse, vary, and recombine layers and materials. Although the same feature was reworked for the web, Photoshop for web features a new version of the Bags feature, called "Layers" in a Web Browser. Other features include "Arrow Pressure API," which makes it easier to navigate photos by adding pressure-sensitive gestures to the scroll wheel. With the update, pressure-sensitive gestures work on any device, even on tablets. Polls showed that Creative Cloud members are thrilled with the overall quality of Photoshop, saying they wanted more automation and an improved user experience (UX). Since the beta release of Share for Review, Creative Cloud members lapped up the idea and Adobe has seen a strong increase in interest and requests for Share for Review. Adobe is working with royalty-free music company E-Linq and visual effects company Autodesk, among others, to develop new features for Adobe Sensei AI, the deep learning engine built into the latest Photoshop versions.
