How It Works: Approximation, unlike the other blending options, is a method to make minor adjustments to the color or levels of your selection. The approximate method is great for the easily detectable shifts that are easy to scrub out from your image. The screen blending option is great for adjusting shadows or for any adjustments that you want to prevent others from seeing. The darken method is great for quickly softening areas of your selection or any adjustment that you make simply to soften them. The lighten method is similar, but it brightens the area instead of softening it. Many companies cater to photo editing and graphic designing needs of professionals.
