Rapid prototyping is a rising trend in the graphic design industry. This allows you to create an entire website or theme in a short span of time so you can finish the job in a very short time. When you are using a template, it is generally indicated that the font size is fixed. Changing the font size is not always an easy job. With **Photoshop**, you can calculate text size. Text spacing options allows you to tweak the edge of the letter. It is the most exciting part of the graphic design and more than seeing the delicate designs in the blank page. **Web design** essentially includes web page layout development and internet website development. To make your website look like you are designing on a blank sheet of paper, we use **web design and development**. First, the web designer will communicate his idea or concept through a wire-frame page. The wire-frame page contains a placeholder for the websites' body content. It serves as a layout blueprint that gives the web designer a realistic view of the website's appearance. Using this method, the web designer can see exactly what their image should look like. These new features in Photoshop on the web and Photoshop on the desktop will make it easier for users to work across the web, from a browser, and on mobile devices. Adobe's Enhanced Mobile Web Experience initiative, announced earlier this year, is a one-stop responsive experience that creates the best mobile web experiences and helps design agencies and developers save time.

Adobe unveiled a new design philosophy at MAX with a focus on collaboration, refining and optimizing the existing Photoshop CS6 features and features that are made even better with enhancements by Adobe AI — the Artificial Intelligence capability of Adobe software that adds machine learning, neural networks and a new workflow for humans. Users will be able to work together in cloud to share, review and edit project proposals. Share for Review (beta) is a solution that allows users to work together in the cloud in real time to find inspiration, build and edit a project proposal without leaving Photoshop. In addition to the Flexible Layer Collab module, Photoshop 9.0 has a new document collaboration feature called Share for Review that lets users work together based on comments that appear on the screen as they work side by side in the same document. The Flexible Layer Collab module is a new, customizable feature that allows users to work collaboratively with layers, characters and metadata in templates, while the Share for Review feature allows Photoshop users to dynamically collaborate on projects in the cloud through a chat interface. The Flexible Layer Collab module supports real-time collaboration features in which users can comment on the layers, characters, or metadata in a project template, but instead of having to leave the app to see what others are working on, the changes will appear in real time on the screen so that all users can see what is changing while working on a single document. The new collaborative features enable Photoshop users to work together on projects, review documents and build a consistent product from the beginning to the end.
