In Photoshop CS6, most of the functions found in layers are now combined into a single tool called the **Layer** tool. To use these tools, you want to select one layer within your document and click the **Layer** tool (which looks like a magic wand) to reveal a dialog box where you'll see the tools that need to be used in relation to that layer. For instance, to add a layer mask to your image, open the Layers panel and select the **Layer** tool. Once selected,

you'll see masking tools in a pop-up box. The basic layer editing and handling functions are: Create Layer, Select Layer, Move, Rotate, Resize, Combine, Hue/Saturation, and Level/Compress. The best way to get started is to be familiar with these tools before editing with them. For example, to edit a layer, select the layer in an image and choose Edit > Edit Layers (or Layer > Edit Layers). To edit a layer, you'll see a little arrow icon that says "Layers" on the top of the dialog box. Inside the "Layers" dialog box, you can add, scale, move, rotate, distort, and transform layers. In the "Edit" tab, you'll see an icon that states "Layer". The icon refers to the editing mode for the selected layer. For example, if you click on the icon for the "Move" tool, you'll select the tool. Likewise, if you click on the icon for the "Rotate" tool, you'll select the tool. Click the Cancel button and you revert back to the Layer dialog box to select a new layer. The timeline holds each photo or video in a sequence in a box. Once a photo or video is captured, it is saved in the timeline. Within the timeline, all of the photos/videos are edited using the multi tool. Once an image is captured into the timeline, you'll then have a thumbnail of every photo or video captured previously or you'll have the option to capture another photo or video. When you press the reset button on the keyboard to capture a photo or video, the timeline will go to the first photo in the sequence and you will be able to edit the photo or video in the photo or video editor. The next photo in the sequence will be captured or you will be able to delete the photo from the timeline. When you finalize your photo or video, you'll have the option to copy it to the clipboard or output it to your photo library or an output device. e3d0a04c9c
