The Top 25 of 2016 program became the Top 25 of 2017, and now we've enlisted the help of *News and Media* once again to select the Top 25 **of 2017**. Help us pick the best apps of the year by emailing us your favorite tools for digital photography, video editing, photo, and art apps. The *Photoshop Award* program, now in its 16th year, is the most visible reward program in the industry. I and my colleagues judge the images of cameras and phones around the world on the basis of picture-making ability. I can't do these very well, but I'm always amazed by the work people create. Photographers are welcome at the awards ceremony. Photoshop, of course, is going to be running in its most capable manner in the Mac version. However, regardless of OS, the planned features are a hit and miss. The more desktop-like workflow would work nicely for card designers for instance, while the color correction dials are more mobile-oriented. Even with this though, Photoshop strikes the perfect balance between powerful tools and an ease of use that equals any comparable editing software. The Skylapse feature uses a customizable timeline to record your actions and settings to produce a rolling "movie-like" video with background music. You can edit this video in Photoshop CC in real-time (akin to Apple's Final Cut Pro X), swapping frames, adding text, and doing more in a timeline than you could on the iPhone. You can extend this video back to the point where you started recording immediately, so you can continue tweaking and editing, or start a new movie (albeit with a "roll" of just that video).

There's also a new Draw tool that lets you use your finger to scribble on an image area, so if you scribble, it scribbles. You can, of course, add the kinds of symbols that are needed from time to time, but the pen will autocorrect when you make mistakes, and the scribble can be easily deleted from the canvas.

And let's not forget the improved automatic exposure correction. Just like in Lightroom, "ACR", if you will, your camera's exposure can be calculated automatically and the result automatically displayed on hundreds of image areas throughout your image to one side or on the bottom. This can earn you a very respectable amount of automatic exposure correction. Oh, and just like in Lightroom, it's completely nondestructive. You can now use it with all your images, even those that have already been pre-processed in a raw converter, and it'll still apply the same fixes to each one of them -- ensuring the outcome is the best (least overexposed, underexposed, and dark, or light) one. This is a really, really good time saver, as it allows for much more efficiency and also less learning for photographers just starting out.

The Content-Aware Fill tool is available for the 2D editing workspace, but it works only on the Layers (pick Layers from the bottom of the Layers panel and click Content-Aware Fill on the Toolbar, or press Cmd/Ctrl+J on a Mac or Ctrl+T on a PC). For those Photoshop users who have redesigned their Layers panels, there's now an additional tab that shows the Content-Aware Fill preview. For the first time, the full desktop version of Photoshop adds workflows to Final Cut Pro's powerful nonlinear video editing tools. This includes workflow-based composition and trimming tools, layer tracking, and playback synchronized to a clip's action. Photoshop also now includes a 25% texture-blurring feature called Content-Aware Exposure, which uses a combination of new AI algorithms and sophisticated masking to peel back the effects of chromatic aberration (red or blue color fringing). This makes it possible to fix exposure problems, chromatic aberration, and lens flare in a single action, without the typical need for multiple steps. Just like Photoshop on desktop, the new Photoshop app now has three editor planes, plus a view finder. A new panel on the right side of the Preview area shows thumbnails of all of the layers in a document, helping to make selection and editing more nimble. The Photoshop app also now brings the feature set of Photoshop CS6 along with the latest advances in AI-powered Photoshop. In addition, Photoshop Elements and Photoshop Express users can now access their files from the desktop app via Dropbox.

There is no such thing as a must-have Adobe product. Unlike Microsoft Office, Adobe products never stay current forever. New drivers, new features, and changes in technology sometimes make the companies behind the software rethink whether some ephemeral feature is worth keeping. The result? Old Adobe products—especially Photoshop—can suddenly become out of date. Over the years, we've felt a need to stay up to date with the elements in Adobe's range, but that often means having to switch to new versions of the software. As with the Mac, if you'd like to avoid doing that much early you can choose Elements. According to Adobe: "Formats aren't always backwards compatible. Changes in the file format can alter the way the software works or how a file can be opened. Also, some versions create some new file formats. And formats may be discontinued. If you want the latest and greatest features in areas like image processing and design tools in Photoshop, you can't avoid upgrading to new versions of the software. One can say that the texture mapping is not a whole feature, but it gives Photoshop some truly amazing surprises. It is the process of replacing all the flat colors across your picture into the "standard" surface of a specific texture. Photoshop creates the texture map in a few clicks of the mouse and then applies the texture on the base layer. The result is excellent, and Photoshop is not the only photo editing app that has this feature. Adobe provides a Darkroom app to capture raw image files in different file formats. It has some basic editing modules like cropping, correcting color balance, removing blemishes, and red eye. It also provides lots of workflows for different uses. The same Darkroom app is also accessible from the browser (Add this extension). Some of the major editing tools like Color Match, Basic Fix, and Unsharp Mask are available right inside the browser.
